

Education:

Mechanical Engineering
Widener University, PA

Professional Summary:

Ronald Zarrilli is the Founder and President of Metropolitan Engineering, Inc./Shapiro-O'Brien (MEI/SO). Mr. Zarrilli capitalizes on technical experience and management skills to provide clients with sound technical solutions and the most responsive service in the business.

Mr. Zarrilli's career includes thirty years in project management and business operations in the technical and design industries. He began his career in power generation with the Test Engineers Group at Philadelphia Electric Company, then became Vice President of Applied Management Systems, a consulting firm specializing in production and inventory management systems engineering.

In 1984 Mr. Zarrilli moved to Bala Consulting Engineers, where he was quickly promoted to Vice President of Marketing. In this capacity, Mr. Zarrilli directed the growth of the company from a ten-person firm to an organization of more than 100 employees in three regional offices by defining business and operational goals, and developing strategies for their achievement.

In 1989, Mr. Zarrilli relocated to Washington, DC to open a Baltimore/Washington area office for Bala Consulting; in 1994 he launched Metropolitan Engineering. Originally a small team focused on providing engineering services for tenant build-outs and renovations, MEI became associated with responsive client service, high-quality design, and quick delivery. In 2003, Metropolitan Engineering merged their talents with Shapiro-O'Brien, an established engineering firm in the design community known for cost-effective designs for base building development. The combined team of MEI/SO today is currently forty engineers and project managers with a broad range of experience in both renovation and base building construction; their broad-base of experience includes 24/7 data centers, residential multi-family structures, commercial high-rises, and institutional facilities.

With the entire MEI/SO team, Mr. Zarrilli is committed to both clients and employees, and believes that great service and quality design make for better building environments. Mr. Zarrilli is a resident of Annapolis, MD and an avid sailor.
